The Steel City

A custom build for the toughest water

The Steel City is our most flexible solution for the toughest water contaminants. Quality systems combined with carefully selected media make a fully customized treatment system. Well water problems are nearly endless, and so are the ways to configure The Steel City.

Built to Last

Efficient Operation

Fully Customized System

IN SHORT

The Steel City is the fully customized treatment system in the Three Rivers lineup, built three ways (exchange softener, air-injected filter or backwashing filter) with media selected for your specific water. It exists for the problems the standard lineup does not solve, and Three Rivers specifies each build from your free in-home water test results, across the Greater Pittsburgh area.

THREE WAYS A STEEL CITY IS BUILT

- ◆ **Exchange Softener:** Selected to handle dissolved contaminants and can be configured with media to target either positively or negatively charged ions.
- ◆ **Air-Injected Filter:** Compressed air chamber oxidizes dissolved contaminants for efficient removal. A specialized media (or a blend of medias) is chosen for your specific water treatment needs.
- ◆ **Backwashing Filter:** Absorbs unwanted chemicals, odors, and flavors from the water. Blended medias may be used to resolve multiple issues at one time.

Three ways a Steel City is built

SPECIFICATIONS

- All three builds offer **predictive regeneration**; the brine tank is **optional** depending on the build.
- Media blends are selected per water test: there is no standard Steel City, by design.

Is The Steel City right for your water?

Every recommendation starts with a free in-home water test. If your water does not need a system, we tell you that too. Installed by a local plumbing professional under contract with Three Rivers.
